

RAMOON introduce:

BIKE TO SCHOOL PROJECT

Why do we want to bring bicycles to schools?

Teaching balance and control of the bicycle from the age of 2-3 helps the psychomotor development of children and is a great first step to improve self-esteem and proprioception.

All children love cycling (even if some of them don't know it yet!).

However, unsuitable spaces and a dangerous surface can discourage the introduction of this wonderful activity, but there is a solution!

The use of an anti-trauma floor ensures that any falls will only be part of the game!

The floor is made up of modules of various colors that create a real

path to follow and thus provide the first basics of road safety education.

Our standard kit:

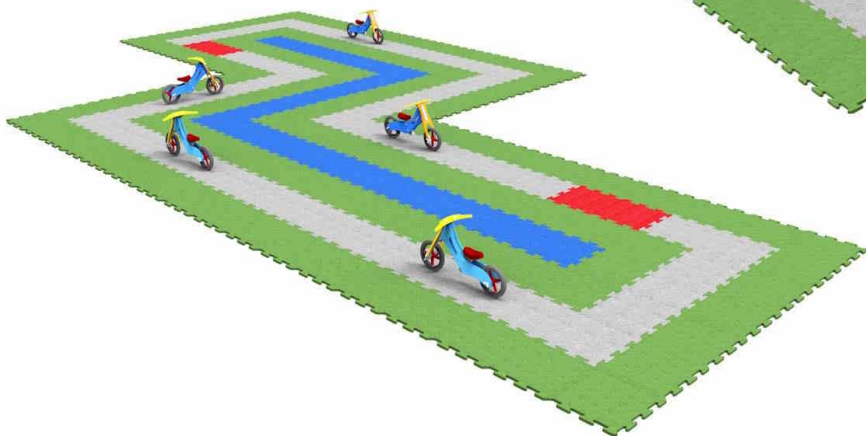

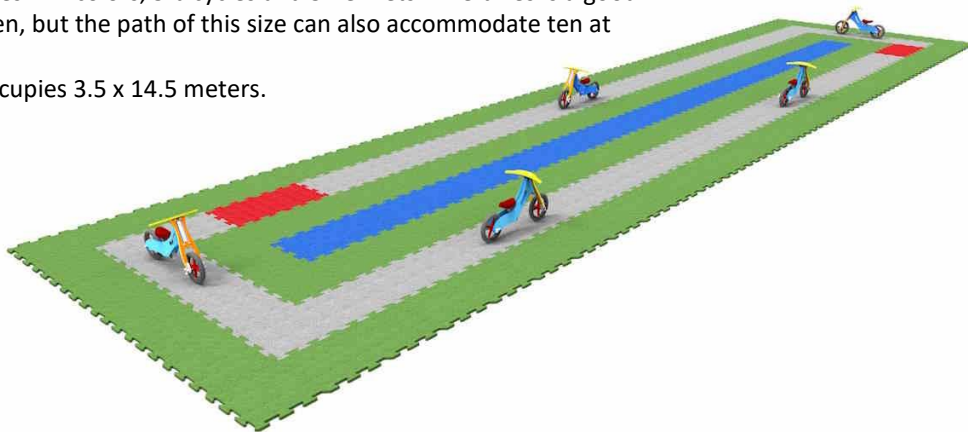

Our standard kit includes the path with rubber tiles in 4 colors, 5 bicycles and 5 helmets. Five bikes is a good number to be able to effectively follow the children, but the path of this size can also accommodate ten at the same time!

The tiles allow you to create a linear path that occupies 3.5 x 14.5 meters.

But the possible configurations are endless.

Path possibilities:

lineare, "L" , "Z" or others...

The tiles we have selected are for outdoors, draining and easily repositionable to quickly create a new path!

How to manage the game?

It is not difficult to teach children to use the balance bike.

It is such an intuitive game that they will learn on their own in a short time by copying their better classmates. At first, children will simply walk along with the bike without sitting on the saddle. Then, step by step, they will gain confidence and the problem will no longer be how to start them, but how to stop!

The bicycle

To learn to pedal, it is essential to start with the Balance bike, that is, a bicycle without pedals, which allows you to develop your balance before moving on to the classic pedal bicycle.

We have selected an excellent balance bike on the market with a magnesium frame, ergonomic saddle, MTB handlebars, ball bearings and pneumatic wheels (non-slip).

The protections

Safety first!

And to protect the little heads of your young cyclists, a protective helmet is essential.

Teaching them to use a helmet is also a great thing, as well as a smart habit!

We have chosen a lightweight helmet that is suitable for the little heads of your bikers, easy to wear, ventilated and with a rear adjustment wheel (essential for a stable position on the head)

Upgrades

Will be always possible to add our special features for Kids Bike Track.
